

GIORGI DIDBERIDZE

Data Scientist • Software Engineer • Quantitative Researcher

@gigididberidze01@gmail.com

(+995) 551002333

Tbilisi, Georgia

giorgi.me

giorgi-didberidze

Data Scientist and Software Engineer with an MSc in Computer Science (ELTE Budapest) and experience spanning quantitative financial research, high-performance time-series databases, actuarial modelling, and production software engineering in C/C++ and Python. Comfortable operating across the full stack – from mathematical modelling to deployed, tested, collaborative codebases.

EXPERIENCE

Data Scientist

TBC Insurance

Feb 2026 – Present

Tbilisi, Georgia

- Working on predictive models for pricing, reserving, and risk assessment using claims and policy data
- Applying GLM-based approaches for claim frequency and severity modelling
- Supporting data-driven decision making across actuarial and underwriting teams

Founder

Tbilisi Data Science

Jul 2025 – Present

Tbilisi, Georgia

- Founded and lead the Tbilisi Data Science community; design and host hybrid in-person / online meetup events on Data Science and AI topics.
- Manage speaker recruitment, agenda curation, and community growth across the local practitioner network.

Mentor – ML & Data Analytics

TalentLabs

Sep 2022 – Present

Remote

- Guide cohorts through an end-to-end ML curriculum: statistics, classical ML, deep learning (MLP / CNN / RNN with TensorFlow and Keras), Advanced RAG, LLM Agents, OpenAI Agents SDK, Multi-Agent Systems, and Apache Spark.
- Deliver Data Analytics modules covering Python-based analytics, ETL, and Data Warehouse design.

Data Analyst

TBC Bank

Sep 2024 – Mar 2026

Tbilisi, Georgia

- Designed and maintained SQL and Python analytics pipelines; implemented scheduled workflows that eliminated manual reporting overhead.
- Built self-serve Power BI dashboards enabling business units to monitor KPIs independently.

Data Software Engineer

KX Hungary

Jan 2024 – Sep 2024

Budapest, Hungary

EDUCATION

MSc Computer Science

Eötvös Loránd University

2022 – 2024

Budapest, Hungary

Data Science Specialisation

Final grade: 4.35 / 5.00

Thesis: The Effect of Volatility on the Dynamic Dependency Structure of Crypto Assets

Stipendium Hungaricum Scholar (2022/23)

BSc Computer Science

University of Debrecen

2019 – 2022

Debrecen, Hungary

Final grade: 4.23 / 5.00

Thesis: Software-Economy Readiness of RISC-V Architecture

Stipendium Hungaricum Scholar (2019/20)

TECHNICAL SKILLS

Languages & Runtimes

Python C / C++ Q / KDB+

SQL JavaScript Matlab

Quantitative & Statistical

Statistical Inference

Time-Series Modelling

ARIMA / LSTM

GLM / Actuarial Pricing

VaR / TVaR

ML & AI

scikit-learn TensorFlow

PyTorch LLM Agents / RAG

Apache Spark

Databases & Infrastructure

KDB+ PostgreSQL

MongoDB InfluxDB Redis

Docker AWS Azure GCP

Dev & Tooling

- Developed and maintained high-performance KDB+/q data solutions for real-time financial time-series ingestion, querying, and analytics.
- Extended and refactored HTML5 / JavaScript analytics dashboards, improving interactivity and rendering performance for end users.
- Collaborated with quant analysts to translate analytical requirements into reliable, well-tested software deliverables.

Research Assistant

ELTE RiskLab

Aug 2023 – Jun 2024 Budapest, Hungary

- Built a real-time crypto market order-book reconstruction system via WebSocket feeds; persisted tick data into KDB+ and PostgreSQL at millisecond granularity.
- Applied quantitative microstructure metrics: Hayashi-Yoshida cross-correlation, mid-price estimation, cointegration tests, and lead-lag analysis across crypto asset pairs.
- Authored the quantitative methodology of the MSc thesis on dynamic dependency structures of crypto assets under volatility regimes.

NLP Researcher

WBS

Jun 2022 – Sep 2022 Remote

- Researched open-domain text generation and Q&A systems using BERT and GPT-family models; contributed to internal evaluation and failure-mode reports.

Software Developer

Ericsson Hungary

Jun 2021 – Oct 2022 Budapest, Hungary

- Developed 5G UPF features in C / C++; authored unit and integration tests with CMake / CTest / Google Test and maintained GitLab CI release pipelines for a large distributed engineering codebase.
- Conducted RISC-V ISA performance profiling; worked with InfluxDB time-series databases for application telemetry and performance monitoring.

Coding Instructor

TalentLabs

May 2021 – Feb 2022 Remote

- Taught Introduction to Python (theoretical and practical) to enrolled cohorts; developed problem sets, grading rubrics, and live coding exercises.

Linux / Bash / QEMU

Git

CMake / CTest / GTest

pytest

React

Power BI / DAX

LANGUAGES

Hungarian (A2) ●●●●●

HONOURS & AWARDS

 Hackatom Hungary – 1st Place

Debrecen, 2021. Led team *Strontium*: nuclear plant power-consumption forecasting using LSTM and ARIMA; ultrasonic weld-joint data analysis.

 GreenTech Hackathon – 1st Place

Amsterdam, 2021. Solar car race strategy optimisation (Top Dutch Solar Car Racing).

CERTIFICATIONS

SQL Advanced	HackerRank, 2024
Python for KDB+	KX, 2024
KX Fundamentals Capstone	KX, 2024
Modernizing Data Lakes & Warehouses	Google Cloud, 2023
Building Robots with TJBot	Cognitive Class, 2021
Deep Learning for Computer Vision	NVIDIA DLI, 2021
Certificate In Introduction To Networks: Routing & Switching	Cisco Networking Academy, 2020

CONFERENCE

RISC-V Summit 2021 — San Francisco

Presented BSc research on RISC-V architectural properties to the global open-hardware community.
